ABOUT ME

Full-stack engineer building web apps with depth in Chrome extension, REST APIs, on-device computer vision, and real-time systems - with an eye for interface detail that keeps features both polished and scalable.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C#, HTML, CSS

Frontend: React, Vite, Tailwind CSS, GSAP, Three.js

Backend: Node.js, Express, Flask, .NET, REST APIs

Realtime & Systems: Socket.IO, WebSockets, RabbitMQ, Chrome Extensions (Manifest V3), TensorFlow

Data & Auth: MongoDB, PostgreSQL, MySQL, Firebase, JWT, bcrypt, Cloudinary

Design: Canva, Figma, Adobe After Effects, Adobe Photoshop

PROJECTS

Meet ASL — *Chrome Extension, On-Device Computer Vision*

[GitHub ↗](#)

- Enabled users to join any Google Meet Call and Communicate via **Sign Language** directly in-browser, with **no external App**, plugin or additional software required.
- Built a **Manifest V3 extension** that intercepts Google Meet's webcam feed via `getUserMedia` and runs **MediaPipe Gesture Recognizer** for real-time ASL detection, returning a captioned virtual camera stream.
- Split logic across Chrome MAIN and ISOLATED worlds with DOM-event IPC; all inference runs on-device - no video leaves the browser.
- Resolved Google Meet's Trusted Types CSP restrictions and stream feedback-loop bugs to ship stable, production-usable interception.

Relay (LetsChat) — *Realtime Chat Platform*

[GitHub ↗](#)

- Built a full-stack chat application (React, Zustand, Express, Socket.IO, MongoDB) with **JWT-cookie auth**, **bcrypt hashing**, and live online presence.
- Introduced **RabbitMQ** as a durable message broker for ordered delivery across multiple **Socket.IO** processes, with automatic Socket.IO-only fallback when the broker is unavailable.
- Integrated Cloudinary for media uploads and an in-memory MongoDB fallback, enabling dependency-free local development.

Personal Portfolio — *Swiss Design Inspired Portfolio/ React.js*

[Live Site ↗](#)

- Personal site presenting product work on a 12-column grid with GSAP intro motion, inspired by Swiss Design and Typography.

EDUCATION

Bachelor of Information Technology — Torrens University, Adelaide, SA

Final year — expected Dec 2026
